

PRESS RELEASE

MUGATO NAMED IN THE 2026 GARTNER® HYPE CYCLE™ FOR MONITORING AND OBSERVABILITY

Copenhagen, Denmark — Jul 31, 2026

Mugato, a provider of agentless IT infrastructure discovery and dependency mapping, has been recognized as a Sample Vendor for Digital Platform Conductor (DPC) Tools in the Gartner® Hype Cycle™ for Monitoring and Observability, 2026. It is the third 2026 Gartner Hype Cycle to name Mugato in the category, following the Gartner Hype Cycles for Infrastructure Platforms and for I&O Automation.

The report describes the observability market shifting from visibility toward autonomous, cost-efficient operations. According to Gartner: “The earlier challenge, where up to 84% of users struggled with the cost and complexity of their observability responsibilities, has intensified with AI workloads and telemetry explosion. Organizations are moving from ‘collect everything’ to ‘collect what matters for decisions.’”

We believe Mugato's inclusion in the Hype Cycle for Monitoring and Observability points to a structural gap that more telemetry alone does not close. Monitoring and observability tools are built to show what is happening. Mugato addresses the foundation: what a service actually is, what depends on it and what will break if it changes.

Mugato reveals the shape of an organization's IT, giving teams the structural context to decide what matters, rather than instrumenting everything by default.

“Observability tells you what is happening in your environment. The harder question is what everything depends on, what a service actually is and what breaks if you change it,” said Christian Stendevad, CEO of Mugato. “We believe being named a Sample Vendor for Digital Platform Conductor Tools reflects that these are complementary layers: when you understand your dependencies, you know what to monitor and why.”

”

That structural layer is what Mugato was built to provide.

“As operations move toward autonomy, the systems making decisions need a reliable model of how everything connects,” said Michael Frandsen, CTO and Founder of Mugato. “We built Mugato to map that structure and provide the dependency foundation that helps teams cut through the noise and focus on what matters.”

About Mugato

Mugato provides enterprise-grade IT infrastructure discovery and dependency mapping solutions that enable organizations to execute complex infrastructure projects with confidence. Trusted by global enterprises across regulated industries, Mugato's platform delivers the visibility and insights required to reduce risk, accelerate timelines and ensure business continuity during critical infrastructure transformations.
